Douglas Contour™ M-75 Multiwrapper handles lightweight containers to help meet sustainability objectives

Alexandria, Minnesota – April 24, 2008

The Douglas Contour™ M-75 Multiwrapper helps meet sustainability objectives by handling lightweight containers using the uniquely repeatable Smartrak® Steady Stream Infeed system. The Smartrak® greatly reduces line pressure so containers are not pushed against one another, eliminating product damage and distortion while allowing the metering system to function properly. Enhanced M-75 features include the Slipstream™ Pinless Metering, side film stands, and quick-change servo driven wrapping wands. Built-in flexibility assures large size ranges and quick, tool-free changeovers.

Each feature is very simple and easy to understand. Slipstream™ Pinless Metering requires minor adjustments, a slipsheet change, and intuitive steps through the control panel when completing changeovers. A convenient side-mounted film stand is mounted outside the machine and at waist level for easy and ergonomic film roll loading and splicing. Quick-change servo driven wrapping wand tracks minimize the need for friction belts and maximize the size range with circular, elliptical, or trapezoid wand paths. Other valuable features include automatic servo homing and additional quick-release cam style clamps in the infeed, metering, and transfer areas that require little or no adjusting, making changeovers even more efficient and repeatable.

The Contour™ M-75 also features the patented and patent-pending heat tunnel using advanced heat and airflow management to deliver tightly wrapped products on pads, u-boards, or in film only for excellent package integrity and appearance. Speeds are to 75 cycles per minute.

All Contour™ M-75 Multiwrappers are backed by Douglas' exclusive 3-year limited warranty.
