New Douglas Multiwrapper produces excellent bull's-eyes in multiple lane production

Alexandria, Minnesota – September 6, 2007

The new Douglas Contour™ M-50 Multiwrapper uses a film perfling mechanism in the film feed area that maintains the integrity of one piece of film during the film wrapping process when running multiple lane production. This increases film control, placement, and speed while maintaining excellent inside and outside bull's-eyes. Other traditional methods try to maintain control of multiple pieces of film during the film wrapping process.

The Contour™ M-50 features quick-change wand paths coupled with built-in intuitive programming for maximum adaptability to existing and future products and a large size range. Changeovers are completed in minutes with minimal change.

Unprecedented management of airflow and tunnel heat assures excellent bull's-eyes in single and multiple lane production. To increase package strength for large packs, optional pad and/or u-board can be added. Other features include a side mounted film stand for convenient film roll loading and splicing and a quick-access film cutter assembly for maintenance efficiency.

For more information, call 320.763.6587 or visit www.douglas-machine.com.

[About Douglas Machine Inc.](#)

Founded in 1964, Douglas Machine Inc. is recognized as a global leader in automated packaging solutions for paperboard, corrugated, and shrink-film. Today the company specializes in the design and manufacture of cartoners, sleeves, case and tray packers, and shrink-wrap systems. Customers from many different markets including food, beverage, personal care, and pharmaceutical, have come to rely on Douglas' automation expertise and value-added services to maximize their throughput. Based in Alexandria, Minnesota, Douglas Machine also has operations in Deerwood, Minnesota.
