Invex® IM Brings a High Level of Performance to Mid-Range Applications *Conveniently flexible and loaded with experience-based design*

ALEXANDRIA, MN, December 6, 2012 – Douglas Machine Inc., a global leader in automated secondary packaging solutions, provides a new horizontal case/tray packer as part of its complete line of packaging machinery. The Invex® IM brings a higher level of performance to mid-range case packing applications.

The new Invex IM offers an economical solution for mid-range case packing applications. Applications include the packing of cartons, bundles, cans, and bottles into corrugated cases and trays. Invex IM design methodology eliminates the use of less efficient air cylinders and the plowing of flaps. This provides precise control over flap folding, case squaring and glue compression resulting in higher quality cases and greater reliability. The machine is flexible and easy to changeover for a wide range of products and case sizes. The Douglas family of horizontal load case packers, including Invex IM and high speed Axiom Series, provides customers with the right technology for their application at speeds up to 80 cases per minute.

Learn more about how the [Invex IM](#) can solve your case packing challenge. For more information, call 320.763.6587 or visit www.douglas-machine.com.

About Douglas Machine Inc.

Founded in 1964, Douglas Machine Inc. is recognized as a global leader in automated secondary packaging solutions for paperboard, corrugated, and shrink film. The company specializes in the design and manufacture of horizontal case/tray packers, top and bottom load case packers, cartoners, sleeves, and shrink wrap systems. Based in Alexandria, Minnesota, Douglas is an employee-owned company that has installed more than 7,000 machines in 30 countries. For more information, visit www.douglas-machine.com.
