

Robot Maintenance Program

Managed Diagnostic Maintenance

Improve your bottom line

with the Robot Maintenance Program from the experienced professionals at Douglas

Program Summary

The Robot Maintenance Program provides you with an experienced technician who conducts visual inspections and preventative maintenance for your robot and equipment, and identifies worn or broken parts. The technician will make simple adjustments and provide informal hands-on training to help increase machine efficiency. This program consists of two visits made over a 12-month period and as a benefit, you receive five percent (5%) off the current published hourly service rates.

Program Maintenance Schedule

During each visit an experienced FANUC robot technician will do the following:

- Complete a full machine assessment
- Perform preventative maintenance on the robot
- Backup the robot's program onto a USB
- Visually inspect the robot, controller, teach pendant and equipment
- Check for excessive audible vibration and noise
- Lubricate the robot per specifications
- Replace RAM and APC batteries
- Upgrade firmware on equipment, if needed
- Report on condition of robot and controller; detailing further action required
- Provide hands-on training for the robot and equipment

The Robot Maintenance Program is customized for your equipment. If you would like adjustments to the program, please contact Douglas to discuss available options.

For complete program details please contact Technical Services at [320.763.5507](tel:320.763.5507) or service@douglas-machine.com.
